

# The **geographical** distribution of **personal networks** of migrants in **Barcelona**

José Luis Molina, Fabien Pelissier, Miranda J Lubbers,  
Juergen Lerner & Mariana Sant  
(UAB – ACSAR – U. Konstanz)

5th UK Social Networks Conference

London, 3rd - 5th July 2009

# Research questions ...

- Looking to a sample of some ethnics groups ... how we can map simultaneously their **local, regional** and **transnational** relationships?
- Is there any relationship between the “diaspora” (average geographical distance among alters for each person and/or each ethnic group) and the **social support locally available**?

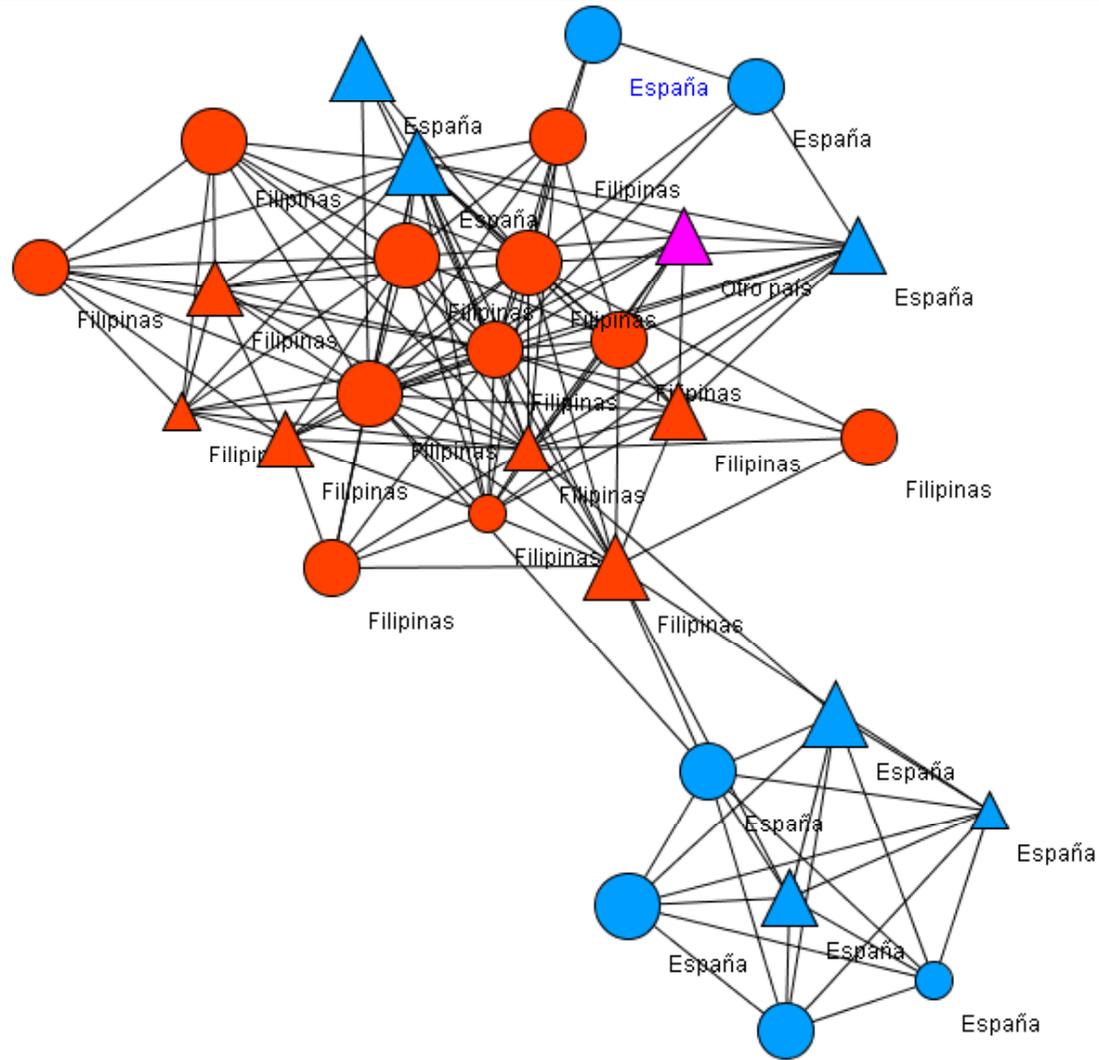

# The data ...

- During January-June 2009 we collected information about the personal networks of **75** people from three collectives: Sikhs, Chinese and Filippineans living in Barcelona.

<b>People</b>		<b>Gender</b>		<b>Total</b>
		<b>Male</b>	<b>Female</b>	
	Sikh	15	10	25
	Chinese	10	15	25
	Filippinean	10	15	25
<b>Total</b>		<b>35</b>	<b>40</b>	<b>75</b>

# Methodology

- Data was collected with the aid of **EgoNet**:
  - Information about Ego.
  - Name generator (fixed choice of 30 alters).
  - Alter attribute module.
  - Alter-alter relationships.
- When the four modules are completed it is possible to obtain a visualization and conduct an interview.
